Running well on older computers

- Choose **1280×720** or **1366×768** and press APPLY.
- Set **Frame rate** to 60 and keep **VSync** on.
- Try **Windowed** or **Borderless** if fullscreen switching is slow.
- Close browsers and other programs running in the background.
- Windows: update your graphics driver from Intel, AMD or NVIDIA. Mac: keep macOS updated.

Troubleshooting

- **Controller not working**: connect it before starting the game, then move a stick. The mouse cursor hides while a controller is in use.
- **No sound**: check Music and Sound FX volume in Options and your system output device.
- **Game won't start or crashes**: on Windows, update your graphics driver and make sure DirectX 11 is installed. On Steam, use Verify integrity of game files.
- **Settings won't stick**: on Windows, settings are saved in GameUserSettings.ini under %LOCALAPPDATA%\Vigintigon\Saved\Config. Make sure that folder isn't read-only.

Support

Email **info@vigintigon.com** or post in the Discord (discord.gg/NNYhG5VRuT). Include your computer specs, the table you reached and the steps that cause the problem.
